Since 1986... **Brings Meaning To Life!**

Byart Group is a product of a durable, aesthetic and minimalist endeavor. It redesigns bioclimatic pergola, awning and glass systems with an inspiration from the constructive, analytic and universal energy of the art, and delivers solutions for each season condition.

Byart Group is operating in a 12.500 sqm production facility with the knowledge and experience it gained from its 30-year-old sector experience. It has expanded its domestic and overseas production with the facilities it has. It reached to its professional structure thanks to the solutions it brings to the living spaces.

Byart Group meets all customer needs by offering a wide range of products that are covered under the quality and reliability of the SmartRoof, VertiGlass and PergoLine brands. It extends its portfolio with its professional management team, experienced marketing department and satisfied domestic and international customers. Byart Group provides services through distributors abroad. It exports forty percent of its total capacity, mostly to Europe; more than 50 countries in continents.

Lift Motion

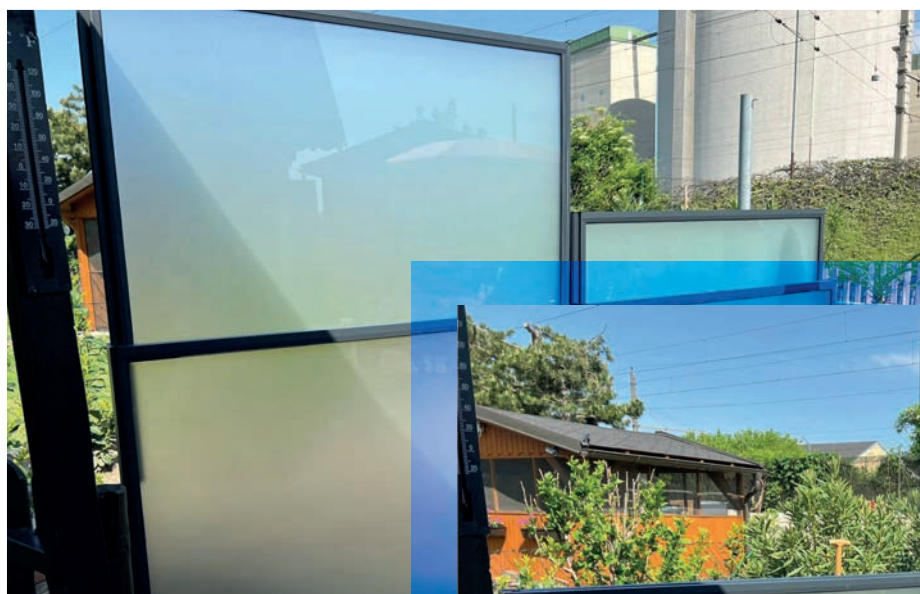

Lift Motion is an entirely new concept for height adjustable windscreens. Through this unique product you can maximize the use of your patio/porch and you can easily stop the wind within seconds. With the counter balanced glass you can easily adjust the height of your windscreen and create that snug feeling.

Lift Motion Plus

Thanks to Lift Motion Plus, which is designed to be easy to use and comfortable, you do not put wind and sound insulation between you and nature in your living spaces. Lift Motion Plus is perfectly compatible with every architectural structure and is supported by special lifting systems with shock absorbers.

Single Motion

Single Motion offers modern lines, practical use and elegance. It can be used both as a railing and a windbreaker. Single Motion's motorized system can lift the 1100 mm parapet module up to 1900 mm for a perfect fit for your living space.

Double Motion

Double Motion is a durable, functional and fully insulated system developed for ease of use in living spaces. DoubleMotion is ideal for pillared structures. It is the half fixed and half movable in height. Motorized system makes each module independently controllable. Lack of an aluminum frame adds a wider appearance to the space.

Triple Motion

TripleMotion glass panels are a new generation of glass system. They transform the outdoor living spaces into more convenient ones with a modern touch. TripleMotion consists of 3 modules; one third of which is a fixed parapet while the other two thirds are movable glasses. The aluminum frame feature makes it a strong structure.

- Triple Motion: 8mm Tempered Glass with Belt
- Triple Motion Elite: 8mm Tempered Glass with Chain
- Triple Motion Elite Plus: Insulated Glass with Chain

Triple Motion Platinum

Designed as the most advanced version of glass balcony closing systems, Triple Motion Platinum is a wipeable guillotine glass system. It is opened and closed without touching the system with the remote control. Ideal for high floors, terraces and balconies. Giving a comfortable and ergonomic use, Triple Motion Platinum is easily cleanable.

Slide Motion

SlideMotion can be designed with or without threshold, with its design that does not allow narrowing in the areas where it is applied thanks to its glasses that move horizontally. Providing heat and sound insulation thanks to the bristle wick and PVC wick channels on the wing profiles, SlideMotion also offers easy cleaning thanks to the independent movement of its wings.

Vista

Vista consists of blades that move in a sliding manner in the horizontal direction. It is produced according to the length of the system, according to the details of 3, 4 and 5 rails. 10mm tempered glass is used in the system. The water that may occur in the system as a result of rain and condensation is discharged out of the drainage channels integrated in the lower rail of the system. Since there are no aluminum profiles and insulation wicks in the vertical direction between the wings, its insulation is lower than standard systems. In each wing of the system, two high-quality, single-bearing and height-adjustable wheel sets are used so that the wing can operate quietly and comfortably.
